## **DETAILED ACTION**

### ***Allowable Subject Matter***

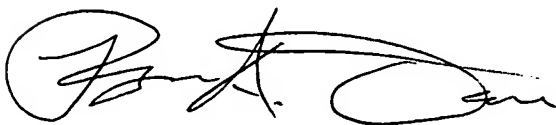

1. Claims 2-9 and 11-14, now renumbered, are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: Independent claims 2, 3, 4, 9, 11, 12 and 13 (now renumbered as claims 1, 5, 6, 8, 9, 11 and 12, respectively) each teach a system with two controllers, wherein the first controller has two memories in which the same data is recorded at the same time from the host system, a response is sent to a host system, and then the data stored in the second memory is transferred to a third memory of a second controller. In independent claims 2, 3, 4, 11, 12 and 13 (now 1, 5, 6, 9, 11, and 12), The second memory of the first controller and the third memory of the second controller are in a different power domain than the first memory of the first controller. In independent claim 9 (now 8), the first and second controllers are connected to a host system interface unit via a switching unit. A key component of the applicant's invention, which is reflected in all the independent claims, is that data is written to the first and second memories at the same rate before the data in the second memory is written to the third memory in the second controller, which is preferably a slower, nonvolatile memory. This feature of applicant's invention allows separate power boundaries such that data remains consistent in case of a power failure. No prior art of record, singularly or in combination teaches all elements of the independent claims such that one of ordinary skill in the art would have been motivated to achieve the present invention.
